Career Objective

Dedicated Junior Web Developer with proficiency in HTML, CSS, JavaScript, React.js, aiming to apply my knowledge and passion for creating engaging and responsive web solutions that enhance user experiences.

Skills & Technologies

Expertise: HTML, CSS, JavaScript, React js, Tailwind CSS, Daisy UI.
Comfortable: React Router Dom, Vercel, Bootstrap, Firebase, Node js, Express js.
Familiar: MongoDB, JWT, React Hook Form, Dotenv, TanStack Query, Axios, Recharts, React Awesome Components etc.
Extra Skills: Photo Editing, Graphic Designing, Quick Learner, Adaptive with new Technologies and Skills.

Projects

Name: Job Navigator (It is a website for Finding Jobs and Applying for them) | **GITHUB LINK** | **LIVE SITE LINK**
  Features:
  - In my Projects I created Dynamic Route link, With the help of the Dynamic Link You can navigate to the different page without any Reload.
  - Here User can Either choose "Show Onsite Jobs" or "Show Remote Jobs". Using the filter Buttons.
  - Also in this website I add an Error Page, So that when you Click or mistype something you will get a "404 page not found" warning and you then click on the link to go back home.
  Technologies: React js, React Router Dom, HTML, vanilla CSS, Recharts.

Name: Tasty Meal (This is a website where you can see food recipes and add favourite food recipe to your preference) | **GITHUB CLIENT LINK** | **GITHUB SERVER LINK** | **LIVE SITE LINK**

  Features:
  - Here in the Header I use 3 links using activeLink to give a preview of which route or page I am present now.
  - In the navbar there is user profile pic and logging button if the user is logged in it will show the profile pic and when hover on the pic it will show the logged in user name, in same time there will be logged out button if user logged out then the user pic will be gone and the logging button will appear.
  - I used react-toastify to show the added recipe message in the website

  Technologies: HTML, Tailwind CSS, React js, React Router Dom, React Toastify, Firebase Authentication, Environment variables, Express js, Node js, Vercel.

Name: Enigma Magic (It is a website where user can learn magic by enrolling for classes) | **GITHUB CLIENT LINK** | **GITHUB SERVER LINK** | **LIVE SITE LINK**

  Features:
  - Here in the Home page of the website I have created a Dark/White mode toggle button where you can switch the theme of the website based on your preference.
  - I used Stripe js to add a payment feature to pay the classes that the user selected previously.
  - Here I used JWT for Secure Login and Registration.

  Technologies: HTML, Tailwind CSS, React js, React Router Dom, Stripe js, Node js, Mongodb, Express js, Dotenv, Environment variables, Daisy UI, Axios, Firebase, TanStack Query, JWT, React-awesome-reveal package, Vercel, React Awesome Components etc.
